

Quality Engineering Platform Master Plan (v1)

Vision

Build an enterprise Quality Engineering Platform rather than a single Playwright framework.

Core Principles

Platform-first; modular; monorepo; reusable shared services; Infrastructure as Code; AI-ready; dashboards and observability built in.

Top-level Repository

qe-platform/
- documentation
- architecture
- standards
- testing (gui, api, contract, performance, security, accessibility, etc.)
- platform
- infrastructure
- dashboards
- ai (agents, skills, prompts, workflows, mcp)
- pipelines
- shared
- tools
- scripts

Testing Domains

GUI (Playwright), API, Contract, Performance/Load, Security/Pen Tests, Accessibility, Visual, Mobile/Desktop, Chaos, Integration, Smoke, Regression, End-to-End.

Platform Services

Authentication, configuration, logging, secrets, environments, test data, telemetry, notifications, reporting.

Infrastructure

Terraform, Docker, Kubernetes, Helm, cloud modules, monitoring, local development.

Dashboards

Executive, engineering, release readiness, quality trends, security, coverage, Allure, HTML, Grafana, Power BI.

AI

Claude agents, skills, prompts, templates, workflows, MCP integrations.

Roadmap

Phase 0: Vision & Standards
Phase 1: Enterprise Architecture
Phase 2: Repository Foundation
Phase 3: Shared Platform Services

Phase 4: Infrastructure as Code
Phase 5: Test Engines
Phase 6: Reporting & Dashboards
Phase 7: AI Layer
Phase 8: CI/CD & Quality Gates
Phase 9: Governance & Documentation

Next Step

Produce a detailed Enterprise Architecture Blueprint before creating folders or writing code.
